

# Automate & Manage Paper Processes

## How does it work?

QuickForm doesn't explain well. But THINK. **No Scanning, No data capture, High Accuracy, exact original image**, time and date stamped, "completely complete" forms, ability to complete later yet link changes to the original. Go to [www.expedata.net](http://www.expedata.net)

## What does it do?

QuickForm seamlessly converts written data into business intelligence. Using Digital pen and paper records written records are recorded when created, the flash data is sent to and digitized by the online server, thereby turning paper driven processes and procedures into "state of art" workflow 'virtual back office' process without changing existing processes. This means: No change management!

## IT CHANGES NOTHING IT CHANGES EVERYTHING!

*QuickForm is amazing. Simply WOW!*

## How does QuickForm add value?

Lithotech, QuickForm's partner, supplies the technology. QuickForm adds business rules, workflow and near real time verification to the process. This inevitably involves a total relook at your process requirements and regeneration.

## QUICKFORM PULLS THE RABBIT FROM THE HAT.

## Is it expensive?

Pen Breakeven occurs at about 200 new forms per pen per month. The cost of Black Lithotech Anoto printing is comparable to colour printing. Virtualisation depends on your requirements.
